
Each marker: mean of 12 equally weighted initial-condition means. Lines guide the eye; no confidence intervals.
K = future 0.1 s steps; all 2,656 / 2,608 / 2,548 eligible windows valid at K = 1 / 5 / 10 for both plotted seeds.
Seed: training randomness setting. Seed 11 omitted: validity masks differ. Overlapping windows are not independent.
